CULINARY INNOVATION AND NEW PRODUCT DEVELOPMENT

Product Description

Jellyfish powder has a unique taste which is very suitable as an additional seasoning in cooking, coated with curry spices so that it adds additional flavor beyond savory. The purpose of using jellyfish as the main ingredient of this product is to create an innovative product. Jellyfish itself also has high nutrients, vitamins, and kalsium, and antioxidants.

TRIAL PROGRESS (50 – 100 WORDS)

The result obtained after conducting the first trial of the product “Jellyfish Powder” is that it already has a fine powder texture. However, there is still a lingering fishy smell in the final product, and the taste can still be adjusted further. Additionally, for 300g of jellyfish, only 10g of powder can be produced in the final result, as it turns out this ingredient has a very high water content, resulting in a significant shrinkage during cooking.
