

CHAPTER V CONCLUSION

There are so many healthy snack demands of the local food industry. It makes the local industry have to compete for issuing various innovations and good research and development products. We take the advantage of this situation by introducing snake fruit (salak) cookies.

Usually to make cookies, people use plain flour as the main ingredient. But here we use snake fruit and turn it into flour as the main ingredient. Snake fruit is rich in nutrients, high fiber and vitamin C, it can be a smart solution for those who feel bored with general cookies so we invent new kind of healthy and tasty cookies.

We sure this product can compete with the other healthy snacks on the market. Overall, our product still need to undergo a process of adding flavors that consumers do not get quickly bored.
