

CHAPTER I

INTRODUCTION

1.1 Background

Chips is a food made from any ingredients that processed with conventional or modern method . Back then , people make chips using a conventional fry pan , but now people made it with a any kind of modern machine such as vaccum fryer. Turn an ingredients into a chips can also make the ingredients itself more lasting and very convenience to consume .

Fruits in an example of ingredients that can be processed into a chips . In indonesia , any kind of fruit are very easy to get . Fruits are loved by so many people , especially jackfruit . Making fruit chips is also a good solution to take advantage of people who like to eat fruit as a snacks.

Jackfruit demands in Surabaya is high , instead not only the flesh that can be eaten , but also the seeds . The seeds of jackfruit isn't an usual ingredients of food . But it also can be turn into something good with also contains high nutrients. Jack fruit seeds is soource of carbohydrate , protein , and energy so it can be used to be a very potential product . Jackfruit seeds is also source of minerals that contains iron , fosfor , and calcium . Jackfruit seeds are made not very different compareed to other chips products , what make its differents is jackfruit seeds chips is made from the third layer from the jackfruit seeds that has a white-ish colour .

Jackfruit seeds are very easy to get even not in the right season . Because people don't know how to processed it , the price of jackfruit seeds are very cheaps. Our company sees that as the opportunity to sell it because we're the pioneer to make this kind of product . And we also help to use the unused part of jackfruit so it will not go to waste.

1.2 Objectives

The Purpose of making this products :
